

Chapter 2

This chapter was my first introduction to POP, IMAP, and SMTP. Understanding this allows me to customize my experience with email; if I were to just have it update to my laptop I would use POP, could be for security, or just IMAP4 (which is almost always the case) for connectivity throughout all devices. Learning this has allowed me to help my co-worker who was only receiving emails on their desktop at home and when I mentioned to switch from POP3 to IMAP4, that fixed the problem.
