

Chapter 7

This chapter is my favorite because it goes in depth about the different generations of wireless networks. When traveling and sitting inside an airport, I have wondered how they have internet access across the entire airport, from the runway to their suites. Mesh networks have provided that connectivity.

IoT (Internet of Things) is my personal favorite hobby because this lets me create devices with sensors and control that information based on the operating system that is used and the connections available for automation. This is an ever growing area that has gained my personal interest.
